consists of three types of tissue: Bone, cartilage, and ligaments. Bone is a dense connective tissue that is composed primarily of calcium and phosphate; os-, ossa-, oste-, and osteo- are all combining forms that mean “bone.” Anatomy and physiology | Musculoskeletal Key Most muscle tissue of the body arises from embryonic mesoderm. Paraxial mesodermal cells adjacent to the neural tube form blocks of cells called somites. Skeletal muscles, excluding those of the head and limbs, develop from mesodermal somites, whereas skeletal muscle in the head and limbs develop from general mesoderm. 10.9 Development and Regeneration of Muscle Tissue ... The Anatomy and Physiology module introduces the

structure and function of the human body. You will read about the cells, tissues and membranes that make up our bodies and how our major systems function to help us develop and stay healthy. In this module you will learn to: Describe basic human body functions and life process. Anatomy & Physiology | SEER Training Physiology is the study of the function of body parts and the body as a whole.
