helpful in solving geometric proofs. Inductive reasoning  
is the start of any proof, since inductive reasoning  
develops a hypothesis to test. You notice something  
specific about a localized case ("All these right

triangles I see in my textbook also have two acute angles") and draw a universal conclusion that you will need to test ("All right triangles have two acute angles"). In this paper, we concentrate on deductive proof in geometry where students are first introduced to ideas of proof and proving. We mainly focus on two issues: why some students cannot find proper reasons or theorems to deduce intermediate statements or a conclusion, and why they might accept a proof that contains logical circularity. Students' understanding of the structure of deductive proof Deductive Geometry is for students, parents, and teachers who need practice solving proofs in geometry. Valid deductive reasoning does not

test whether the premises are True. Instead, it only states what would be the case IF the premises are true. IF the premises are True, then the conclusion must also be True, in a properly constructed deductive argument.

This is known as being logically valid. CA Geometry: Deductive reasoning (video) | Khan
