Flux Pinning In Superconductors Springer Usually dispatched within 3 to 5 business days. The book covers the flux pinning mechanisms and properties and the electromagnetic phenomena caused by the flux pinning common for metallic, high-T_c and MgB₂ superconductors. The condensation energy interaction known for normal precipitates or grain boundaries and the kinetic energy interaction proposed for artificial Nb pins in Nb-Ti, etc. are introduced for the pinning mechanism. Flux Pinning in Superconductors | Teruo Matsushita | Springer Flux pinning can keep the superconductor from reaching thermodynamic equilibrium in its magnetic properties and causes irreversibilities in its magnetic behavior. In the following we shall discuss the critical state of the superconductor and the various mechanisms for flux pinning. Flux pinning is the phenomenon where a superconductor is pinned in space above a magnet. The superconductor must be a type-II superconductor because type-I superconductors cannot be penetrated by magnetic fields. Some type-I superconductors can experience the effects of flux pinning if they are thin enough. If the material's thickness is comparable to the London penetration depth, the magnetic field can pass through the material. The act of magnetic penetration is what makes flux pinning possible Flux pinning - Wikipedia The influence of the flux pinning on the vortex phase diagram in high T_c superconductors is discussed, and the dependencies of the irreversibility field are also described on other quantities such... Flux Pinning in Superconductors - ResearchGate The macroscopic pinning force density, $F_p = J_c B$, which works on flux lines in a unit volume is an accumulation of individual pinning interactions and depends generally on the elementary pinning...
